

FINN Consumables

HydroSeeder

HydroSeeder.....

# PRODUCT INFORMATION

## Product name:

### HydroSeeder

FINN HydroSeeder Consumables – are available for every kind of job.

## Produkt description:

Continual product improvement has made today Hydroseeder the most advanced laborsaving equipment for cost-effective seeding of large areas. HydroSeeders let you flexibly apply various blends of seed, fertilizer, fiber mulch, and growth-enhancing additives in one large laborsaving step. Yielding as much as an eight – fold increase in productivity, the HydroSeeder's unique method of „hydraulic Mulching“ can be your company's stimulant for growth.

The FINN HydroSeeding Consumables are an exclusive blend premium products that create the ideal growing environment

FINN Additive System Creates a profitable solution. Make your hydroseeding more profitable by adding value, improving results, and commanding higher prices. FINN's slurry additives are formulated to promote seed germination and turf development across all soil conditions.

FINN offers a complete line additives including:

## StikPlus:

**FINN StikPlus** is a combination of Finn HydroStik and Finn FiberPlus; specially blended to provide both physical bonding of fibers and organic tackifier characteristics.

## HydroGel:

**FINN HydroGel B** is a polymer that is able to store water and nutrients up to 500% its own size and weight.

## HydroMax:

**FINN HydroMax** is a proprietary blend of compounds that enhance the early stages of plant development from germination to viable maturity.

## HPN:

**FINN HPN** is a super soluble, high phosphorous starter fertilizer aimed at supplying all the nutrients and micro-nutrients necessary for the first 4-6 weeks of new seedling life.

## Tru Mulch Wood:

FINN Tru-Wood is produced from the highest quality virgin poplar and pine wood chips for use in HydroSeeding and erosion control applications
